

Product Name :
Hybrid and Electric System Simulator - Electrical

Product Code :
TechnicalLab0418

Description :

Hybrid and Electric System Simulator - Electrical

This simulator allows the study of all the operating features of an automobile with a hybrid system (internal combustion engine and electric motor) or completely electric. It is composed of a panel operated by computer with a silk-screened diagram which explains the positioning of the car components and indicates the features of the system by showing different colors on the panel. Light indicators are on the panel to show the operation of the system. Through the computer, the teacher can monitor the entire system and the operational states entered by the students. The faults can be inserted, followed and checked by the teacher with the use of the software.
