

Product Name :
Sonometer for Physics Electric Labs

Product Code :
BSC-TR-15

Description :

Sonometer provided with weights. Height adjustment for Electromagnet. Sonometer - Sonometer provided with weights.

Height adjustment for Electromagnet.

Sonometer is a useful apparatus for investigating the vibration of a string or wire under tension. The equipment allows the length of the string and its tension to be varied. Sonometer can determine the Frequency of AC mains in an easy way with very precise and fine arrangement. It consists of a thin metallic (steel) wire stretched over two bridges that are usually mounted on a soundboard, also known as monochord. It is used to measure the vibration frequency, tension, density, or diameter of the wire, or to verify relations between these quantities.

Sonometer provided with weights

Height adjustment for Electromagnet

Inbuilt AC supply

Self-contained and easy to operate

Learning material CD
